INTRODUCTION.

PURPOSE.

This list is an essay at compiling a complete enumeration of the plants of Kansas, with their localities, in form convenient for use by botanists and botanical students in correspondence. The compiler does not pretend to say he knows every plant in this list; but, as errors are discovered, corrections will be made in future editions.

NOMENCLATURE AND AUTHORITY.

As to nomenclature the compiler simply adopts those names said by common authority to be the correct ones. He is opposed to changes of name in a plant, and prefers a name long-established and well-known to a name which, though more correct, is comparatively unknown. Notwithstanding this, exceptions are made, where evidence is indisputable as to priority of some other name as applied to a particular plant. Most noticeable among these is *Hicoria* instead of *Carya*, *Navarretia* for *Gilia*, *Castalia* for *Nymphaea*, and others.

As to authority it is generally understood that whoever first discovers, names and describes a new species is entitled to the credit of its discovery. It often happens, however, in the haste of publication, that a species is assigned to a wrong genus; and it oftener happens that the limitations of a genus are changed, or a new genus is erected within the limits of an old one; and if the genus is accepted the new author's name takes the place of the old one, thus robbing the original discoverer of all credit. This is a species of piracy that has long prevailed, and is not without some show of right. Whether right or not it is adopted here; and that botanist's name is given who linked together both generic and specific names, thus assigning the plant to its true place botanically. Every author's name is spelled out at least once in this book, generally the first time it occurs. Where no name is given the compiler doesn't know who is authority. In the grasses the authority of Dr. Geo. Vasey of Washington, D. C., is followed with slight modification.

ARRANGEMENT.

The customary arrangement among botanists of the present day is followed, with a few exceptions on account of affinity or to suit the particular exigencies of the case. A few radical changes are made, as the transferring of the order *Nymphaeaceæ* from *Exogens* to *Endogens*, these plants showing most clearly endogenous characteristics of structure. Conversely, the order *Smilacaceæ*

should be transferred to Exogens, these plants being exogenous when more than herbaceous. This is, however, held for further consideration. The order Cucurbitaceæ is placed under Gamopetalous Exogens where all the members of that order in this list properly belong. The order Sapindaceæ and allied orders, whether dialypetalous, gamopetalous, or apetalous, are grouped together under one heading, as they form a truly natural order, having as many characteristics in common as Compositæ, for instance.

EXPLANATION OF MAP.

The numbers following names of species indicate localities, which may be determined by reference to the index on page 7. The state of Kansas is supposed to be divided into $8 \times 9 = 72$ rectangular districts, each embracing about two counties. Numbering begins with 1, consisting of Doniphan county in the northeast. The next district west of that is 2, embracing Brown county and Nemaha as far west as the 96th meridian. The next district west is 3, and includes the western part of Nemaha county and all of Marshall. The most northwesterly district is 9, including Cheyenne and Rawlins counties as far east as the 101st meridian.

The next tier of divisions is numbered 21 to 29; that is to say the second tier of numbers 1 to 9. The first division is 21, directly south of district 1, and includes parts of Atchison, Leavenworth, and Jefferson counties.

The third tier goes only half way across the state and is numbered 31 to 35. The fourth tier is 41 to 49. In the western half of the state it takes the place of the third tier.

The most southeasterly division is 81, taking in Cherokee in the southeastern corner of the state and the greater part of Labette. The most southwesterly is 89, consisting of Morton and Stevens counties east to the 101st meridian.

A few numbers, as 30, 40, 92, 94, etc., have been applied in isolated cases in the list to show that the plant has been found growing near the boundaries of the state.

ACKNOWLEDGMENTS.

This list is based upon the labors of Prof. J. H. Carruth of Albuquerque, N. M., who has been State Botanist of Kansas for many years, and to whose aid and encouragement is due the compiler's earliest instruction in and incentives to the study of Kansas botany. The compiler is especially indebted to Dr. Geo. Vasey, Botanist, of Washington, D. C., to Prof. W. A. Kellerman of Columbus, O., to Dr. J. H. Oyster of Paola, Kan., and to Chas. E. Smith, 216 S. 15th st., Philadelphia, for valuable assistance in correcting this list. Obligations

are acknowledged to Dr. Wm. Trelease, of the Shaw School of Botany, St. Louis, Mo., for the determination of some plants of western Kansas. A few plants are admitted to this list on the authority of the late Dr. Geo. Engelmann of St. Louis and Dr. J. G. Cooper of Washington, who collected years ago along the Missouri river, in Leavenworth, Atchison, and Doniphan counties.

The following persons have also contributed to this list from the various districts to which they are accredited:

<i>Dist.</i>	<i>Names of Collectors.</i>	<i>Dist.</i>	<i>Names of Collectors.</i>
1	The compiler.		late of Agricultural College; Prof. E. A. Popenoe, Agr. Coll., Manhattan.
2	Mara Becker, Netawaka.	34	M. H. Panton, Junction City; W. Robinson, Cheever,
2-3	Mrs. A. L. Slosson, Leavenworth; Paul Wilkinson, Seneca.	35	C. C. Olnay, Minneapolis; J. M. Waternman, Delphos.
5-8	Prof. W. A. Kellerman, Columbus, O.	41	Dr. J. H. Oyster, Paola; Prof. W. A. Kellerman; Prof. W. E. Castle, Ottawa University, Ottawa.
7	J. D. Hatcher, Long Island, Phillips Co.	41-6	The compiler.
21	Dr. R. J. Brown, Rev. James Wilson, and Mrs. A. L. Slosson, Leavenworth; Prof. E. B. Knerr, Midland Coll, Atchison.	43	Rev. Loren Armsby and Dr. H. M. Byers, Council Grove.
21-2	The compiler.	45	Joseph Henry, Salina (now dead).
22	Prof. A. M. Nissen, late of Wetmore; Miss Mara Becker, Netawaka.	46	Supt. J. R. Bickerdyke, Bunker Hill.
23	F. F. Crevecoeur, Onaga.	47	Dr. Louis Watson, Ellis.
24-8	Prof. M. A. Carleton, Manhattan; W. A. Kellerman, Columbus, O.	47-9	Prof. E. A. Popenoe and W. A. Kellerman; Dr. F. H. Snow, Lawrence.
27	Prof. E. A. Popenoe, Manhattan; E. Bartholomew, Rockport.	51	Professor W. A. Kellerman; Hon. Joel Moody, Mound City.
31	Prof. J. H. Carruth, Albuquerque, N. M.; Dr. F. H. Snow, Dr. A. P. Fellows, and Dr. W. H. Saunders, Lawrence; H. C. Fellow, Washington, Kan.; Rev. John Bennett, Kansas City, Kans.	52	Miss M. P. Wright, Burlington.
31-4	The compiler.	53	H. E. Kinear, Topeka.
32	Prof. Edwin A. Popenoe, Manhattan; Prof. and Mrs. F. W. Cragin, Colorado Springs, Colo.; Miss Eunice A. Lyman, late of Washburn College; Mrs. Omar Newman and Mrs. Geo. L. Epps, Potwin Place; Mrs. A. H. Merrell, Mrs. Allie Kingman, Misses Grace and Lucy A. Hale and Fannie Rowley, Dr. H. W. Roby, Messrs. H. E. Kinear, J. W. Stailey, Geo. D. Hale, Wm. Smith, sr., John W. Adams, Aug. T. Daniels, A. T. Waggoner, H. G. Larimer, Prof. W. A. Harshbarger, and J. W. Beede, all of Topeka; Prof. J. E. Williamson, Fairfield, Iowa; Miss Jennie Kungle, Richland; Orr Adams, North Topeka.	53-7	The compiler.
33	Jerry M. Fields, E. A. Kilian, Mrs. S. M. Thomas, Alma; S. A. Baldwin, Waubunsee; Prof. and Mrs. W. A. Kellerman,	57	Henry Haydock, Ness City.
		58-9	Dr. F. H. Snow, Lawrence.
		61-2	Prof. M. V. B. Knox, Humboldt.
		63	Prof. Z. T. Riley, Topeka.
		64-9	The compiler.
		67	C. C. Webb, Larned.
		68	J. W. Stailey, Lawrence.
		71-2	Prof. J. H. Carruth, Albuquerque, N.M.
		73	Prof. Z. T. Riley, Topeka.
		74	Prof. M. A. Carleton, Manhattan.
		74-9	The compiler.
		79	Mrs. James Jackson, Golden, Grant Co.
		81	Prof. J. H. Carruth; W. S. Newlon, Oswego; Miss M. Cooper, Labette.
		82	Prof. E. N. Plank, Kansas City, Ks.
		83-9	The compiler.
		84	Prof. O. F. McKim, Wellington.
		85	Prof. T. W. Corey, Conway Springs.
		86-8	Prof. W. A. Kellerman.
		88	Miss Dora Jackson, Arkalon.

Correspondents are invited to freely mention any errors they may discover in this list, and to send pressed and dried specimens of any plants found in their vicinity or elsewhere. Botanical names will be returned, and proper credit given in future editions, which will appear about once in two or three years.

MISCELLANEOUS NOTES.

The plants in this list are numbered, usually by tens. The number of any of the tens is readily obtained by noticing the hundreds near the top of the page, then adding the tens. The number of any other plant is simply obtained by counting down from the last ten.

Plants that are marked with a degree mark ($^{\circ}$) or zero (0) are not native in Kansas.

Plants marked with a star are not described in Gray's Manual, 6th edition, 1890, or in Coulter's Manual of Rocky Mountain Botany.

The localities in which plants have been found are indicated by numbers, and may be determined by reference to the index on page 8 and the map on page 7. The collector, or one of several, may be determined by the table of contributors on page 5.

Thus, for instance: No. 128, page 10, "Claytonia virginica L. 31, 41, 81," indicates that this plant has been found in Douglas, Johnson, Miami and Cherokee counties, and was reported by Prof. Carruth, Dr. Oyster, or some of the other collectors from those districts.

No. 149, same page, "Callirhoe digitata, N. 56, 66," shows the plant to have been found in Barton and Stafford counties by the compiler.

The numbers 1-2 indicate the districts 1 and 2; 1-4 indicate the districts 1, 2, 3, and 4.

BUSINESS NOTES.

None but perfect botanical specimens will be sent out unless accompanied by explanation.

A perfect botanical specimen is one that is carefully dried and shows, if an herb, root, root leaves, stem leaves, floral leaves, flowers and seeds or fruit, all as near the natural color as possible, and, in ease of cespitose plants, includes several stems to show that fact. In case of trees and shrubs, one or more twigs showing leaves, flowers and fruit, with date of collection of each is given.

Plants from the general list will be sent at the rate of \$10 per hundred species. A species often contains more than a single specimen. Plants growing only west of the 97th meridian will be sent at the rate of \$12.50 per hundred species. Species will seldom consist of more than a single complete specimen.

Plants followed by the numbers 1-4, 21-4, 31-5, 41-4, 51-4, 61-4, 71-4, 81-4, or any one of these numbers, are in the general list, and will be sent at the lower rate.

Plants followed by the numbers 5, 25, 45, 55, 65, 75, 85, or upward, are only found west of longitude 97 $^{\circ}$, and will be sent at the higher rate.

If specimens ordered are not on hand they will be collected in their season or other plants sent or money returned, as preferred.

Care will be taken in putting up all collections, whether for colleges, societies, or individuals. Correct botanic names guaranteed on all plants sent out.

Orders for seeds, bulbs, and live plants filled in their season. Correspondence solicited. Everything sent carriage free.

Specimens will be MOUNTED on heavy record ledger paper, 11x16 $\frac{1}{2}$ inches in size, at the uniform prices of 25 cents for large plants and 15 cents for small ones, with suitable discounts on larger orders to be made known on application.

Whenever desired, whether plants are mounted or not, they will be packed in strong and handsome tarboard BOXES, covered with imitation-morocco binder's cloth, and with close-fitting covers, the boxes 11 $\frac{1}{2}$ by 17 $\frac{1}{4}$ inches inside, and not exceeding 4 inches deep, for 50 cents each. One box will hold from 70 to 100 plants.

A BOTANICAL OUTFIT, consisting of a solid oak and steel press, 25 pounds of driers, 250 manilla plant papers and a few inter-boards, all cut 11 x 10 $\frac{1}{2}$, a good lens, trowel, and tweezers, all for \$8.00.

A PORTABLE PRESS, 10 pounds of driers, and 100 plant papers, for \$3.00.

Copies of this CHECK-LIST will be sent post-paid at the following prices: One copy, 25 cents; 2 copies, 40 cents; 5 or more copies, 15 cents each.

NEW SPECIES.

- 1395 *Erythronium mesochoreum* Knerr, *n. sp.* Leaves lance-linear, bright green beneath a faint bloom, never mottled with purplish blotches, averaging $\frac{1}{2}'$ to $\frac{3}{4}'$ wide by 6' to 8' and sometimes 10' long; perianth white, tinged a delicate lavender along the veins, and with a yellow blotch toward the base, half reflexed when in full bloom, 1' to 2' long; style slender, club-shaped, arising at a slight angle or almost straight from the ovary; stigmas three, recurved, distinct; ovary oblong, bluntly triangular, with sides convex; ovules oblong ovoid; capsules oblong or elongated obovate, $\frac{3}{4}$ inch to 1 $\frac{1}{4}$ inches long; sterile plants with but one leaf appearing later than the fertile two-leaved forms and few in comparison; corm more or less elongated, consisting of several, one within the other, the outermost enlarging for next year's plant; (no underground runners producing corms at their extremities as in *E. albidum*). Open grassy hill-tops and north-facing slopes as well as in like wooded localities, March and early April, Atchison county, Kansas.
- 1506 *Cyperus Carruthii* Wood, *n. sp.* Biennial; culms triquetrous, slender, 6 inches high, the leaves longer. Umbel simple, almost capitate. Spikes 4-6-flowered, 2 to 3 lines long, terete, very acute. Rhachis with short, trigonous, winged joints. Allied to *C. michauxianus* Schult.—*Trans. Kans. Acad. Sci., Vol. VII.*
- 1514 *Cyperus spiculatus* Wood, *n. sp.* Culm tall, glabrous, triquetrous; involucle of about 7 very long, flat leaves, rough-edged; umbel 8-rayed, rays very unequal, each having from 3 to 7 simple or sub-compound spikes; spikes cylindrical, 1' long or less, with fifty to one-hundred spikelets; spikelets minute, teretish, 1 $\frac{1}{2}$ lines long, 8 to 10-flowered; glumes closely imbricated, mucronulate, the midvein green; stamens 3, style equaling the glume, with 3 short stigmas; rachis slightly winged.—*Trans. Kans. Acad. Sci., Vol. V.*
- 1728 *Setaria perennis* Hall, *n. sp.* Culm ascending or erect, 3 to 7 dm. high; spike cylindrical, simple, green, 2 to 7 cm. long; bristles few, little longer than the spikelets. Propagates freely by slender perennial rootstocks, and seldom ripens seed where cattle freely graze. Frequent in damp alkaline and saline bottoms in central and southwestern Kansas. Perhaps a form of *S. caudata* R. & S.
- 1745 *Sporobolus pilosus* Vasey, *n. sp.* Perennial, from thick roots; whole plant pale green; culms cespitose, rigid, erect, about 1 $\frac{1}{2}$ ft. high, leafy, particularly at the base, mostly simple; sheaths smooth, the uppermost sheathing the base of the panicle, the lower crowded and flattened; ligule inconspicuous; the throat, margin, and both sides of the lower blades pilose, the upper ones involute and attenuated to a long point, shorter than the culm; panicle terminal, spike-like, 2 to 3 inches long, close, the lower part included in the sheath; spikelets 2 $\frac{1}{2}$ lines long, smooth, the lower empty glume $\frac{1}{4}$ shorter than the upper, which equals the fl. gl. and palet, all obtuse.—Resembles *S. asper*, which has the leaves longer than the culm, both empty glumes shorter than the flower, and the leaves smooth or not pilose. Collected in Kansas by B. B. Smyth.—*The Botanical Gazette, January, 1891.*

Number of species and specific varieties of flowering plants..... 1764

SPOROPHYTA.

Selaginella rupestris Spring. ?

FILICES.

Principally on the authority of Rev. James Wilson of Leavenworth, with additions by Prof. F. W. Cragin of Washburn College, Topeka, and Prof. J. H. Carruth of Lawrence.

POLYPODIACEÆ.

- 1775 *Adiantum pedatum* L. Maidenhair Fern. Shady ravines, 2, 21, 31-3, 41, 81; rare.

Aspidium acrostichoides Swartz: Christmas Fern. By streams, 62, 81-3; not common.
goldianum Hook. Goldie's Fern. Shades, 21, 31; not common.
marginale Swz. Shield Fern. Crevices of rocks, 62-3, 83; plentiful.

- 80 *noveboracense* Willd. 21
spinulosum Willd. Shield Fern. 31; rare. (Carruth.)
thelypteris Swz. Marsh Fern. Ravines, 22; Rare.

Asplenium angustifolium Mx. Narrow-leaved Spleenwort. River banks, 21, 31; rare.
ebeneum Ait. Base of mossy rocks, 62, 72-3, 82-4; occasional.
filix-femina Bernhart. Lady Fern. 21; rare.
parvulum Mart. & Gale: 83; occasional.
trichomanes Link. Crevices of limestone rocks, 62; not common.

Camptosorus rhizophyllus Lk. Walking Fern. Top of limestone bluffs, 1, 21, 31-3, 71-2
 81-2; frequent.

Cheilanthes lanuginosa N. Lip Fern. 35, 56; quite rare. (Found at "Rock City," Ottawa county, by Mr. S. C. Mason, and sandstone bluffs along Cow creek in northern Barton county by Mrs. D. J. Evans.)
vestita Swz. Lip Fern. About moss-covered rocks, 62; frequent.

- 90 *Cystopteris fragilis* Bernh. Wood Fern. Woody north slopes, 21-2, 31-3, 41, 51-2, 61-2,
 72-3, 81-3; very common.

Notholaena dealbata Kunze: Calcimine Fern. Northeast face limestone bluffs, 23, 32,
 41, 43, 61-2, 82, 84; rare.

nivea Desvaux: Little Snowy Fern. Reported from Neosho county.

Onoclea sensibilis L. Sensitive Fern. Low, damp places, 31-2, 62; not common.

Pellaea atropurpurea Link: Cliff Brake. Limestone bluffs, 2, 21-3, 31-3, 41-3, 61-2, 72-3,
 81-4, 86-7, frequent.

wrightiana Hook. Wright's Cliff Brake. Same habitat, 35; very rare. (Cragin.)

Phegopteris dryopteris Fee: Ternate Beech Fern. Cliffs, 43; rare.
hexagonoptera Fee: Beech Fern. 51; very rare.

Polypodium incanum Psh. Resurrection Fern. Mossy bark of trees, 52, 62, 71-3; rare.
 1800 *vulgare* L. Rock Polypod. Shady rock sides, 43; not common.

Struthiopteris germanica Willd. Ostrich Fern. 31; very rare. (Carruth.)

Woodsia obtusa Torr. Rock Fern. 12, 21-3, 31-2, 51-2, 61-2, 72, 83; frequent.

OPHIOGLOSSACEÆ.

Botrychium ternatum Swz. Moonwort. Among hazel brush, 21, 51; rare.

1804 *virginicum* Swz. Rattlesnake Fern. Hazel thickets, 1-2, 21-2, 31-2, 41; abundant.

Vascular acrogens..... 42

CELLULAR ACROGENS.

BRYÆ—MOSES.

(PRELIMINARY LIST.)

The compiler has no apology to offer for presenting this list; something must be done some time if a list of the mosses of the state is ever prepared; and no bryologist has as yet appeared to work up a complete list. The field is not a very fruitful one; perhaps that accounts for it. Errors, as they are discovered, will be corrected in future editions. The principal collectors are:

Mrs. E. H. Newman, No. 14 Woodlawn avenue, Potwin Place, Topeka.

Professor F. W. and Mrs. Cragin, Colorado Spring^e, Colo.

Jerry M. Fields, Alma, Wabaunsee Co.

S. A. Baldwin, Wabaunsee.

Miss Mara Becker, Netawaka, Brown Co.

J. D. Hatcher, Long Island, Phillips Co.

Joseph Henry, Salina (since died).

Dr. W. S. Newlon, Oswego.

Prof. J. H. Carruth, Albuquerque, N. M.

Rev. John Bennett, Kansas City, Kan.

The principal authority is Eugene A. Rau, Bethlehem, Pa., as published in the Bulletins of Washburn College Laboratory of Natural History, with a few additions on the authority of Prof. Elihu Hall of Athens, Ill., Prof. Leo Lesquereux, Columbus, O., both now dead, and Prof. T. C. Porter, Lafayette Coll., Easton, Pa., also a few original collections.

ACROCARPI--Fruit terminal.

PHASCACEÆ.—Capsule sessile.

1805 *Ephemerum spinulosum* Bruch & Schimper: Moist clay ground; common.

6 *Phascum carniolicum* Weber & Mohr: Sandy ground, W. Kansas (Prof. E. Hall).

7 *cuspidatum* Schreber: Dry soil, along fences, etc., eastern Kansas.

8 var. *piliferum* Bruch & Schimp. Same habitat.

FUNARIACEÆ.—Capsule nodding, gibbous. Calyptra tetragonal. Peristome none or of 16 teeth, twisted to the right, sometimes with a slight inner membrane.

1809 *Physcomitrium acuminatum* Bruch & Schimp. Moist grounds, N. K. (Rau.)

10 *pyriforme* Bridel: Prairies, E. K., very common; fruits in spring.

11 *tetragonum* Bruch & Schimp. Sandy plains, W. K. (Prof. Hall).

12 *Funaria hygrometrica* Sibthorpe: Bare moist sandy ground, E. K.; common.

POTTIACEÆ.—Capsule narrowly oval or cylindrical. Peristome of 16 flat teeth, bifid or divided into 32 terete filiform segments, often twisted.

1813 *Barbula cæspitosa* Schwaegr. Tree roots on hillsides; common.

14 *fallax* Hedw. Rocks, earth, etc.; frequent.

15 *henrici* E. A. Rau, n. sp. (Bull. Washb. Coll. Lab. Nat. Hist. i, 172): "Diœcious? plants short, branched, closely cespitose, canescent from the white excurrent costæ; leaves concave, short spatulate; costæ keeled, filamentose, near apex of leaf, excurrent portion as long as the leaf, hyaline, serrate; areolation of leaves quadrate and chlorophyllose above, hyaline and elongated toward the base; leaves spreading when moist, imbricated when dry. Habitat: Rocks, Saline county (Joseph Henry). Although without fruit, it appears to be a distinct species belonging to the section Chloronotæ. It differs from *Barbula chloronotos*, Bruch, in its more canescent appearance, shorter and more obtuse leaves, laxer areolation, longer excurrent and more serrate costæ. Plants bearing archægonia only were sent; it is therefore desirable to secure fruiting specimens to complete the diagnosis."

16 *mucronifolia*, Bruch & Schimp. Lime rocks; frequent.

17 *unguiculata*, Hedw. Damp loam, rocks, etc.; common.

18 *Pharomitrium subsessile* Schimp. Open ground, stone walls, etc.; frequent.

19 *Didymodon rubellus* Bruch & Schimp. Stones and ground, near water; frequent.

20 *Leptotrichum pallidum* Hampe: Bare earth in woods; common.

21 *tortile* Muell. var. *vaginans* Lesquereux: Clayey and sandy soils; common.

22 *Trichostomum tophaceum*, Bridel: Moist lime rocks; common.

DICRANACEÆ.—Capsule long-pedicled, erect or nodding. Calyptra cucullate. Operculum rostrate. Peristome simple, of 16 flat entire or bifid teeth, or none.

1823 *Mollia viridula* Lindberg: On ground, eastern Kansas.

24 var. *stenocarpa* Muell.: Topeka.

1825 *Dicranella heteromalla* Schimp. Rocks, clay banks; common.

DICRANACEÆ. CONTINUED.

- 1826 *Dicranella rufescens* Schimp. Clay banks; frequent.
 27 *varia* Schimp. Damp banks, E. K.; common.
 28 *Dicranum scoparium* Hedwig: SE. K. (Dr. W. S. Newlon)
 29 *undulatum* Turner: Damp shades; common.
 30 *Campylopus leanus* Sullivant: Soft, damp, woody earth; occasional.
 31 *henrici* Cardot, n. sp. (Botan. Gazette, August, 1888): Saline county (Henry)
 32 *Fissidens decipiens* DeNot. Lime rocks, etc.; frequent.
 33 *exiguus* Sulliv. Stones in moist and shaded banks, etc.; common.
 34 *minutulus* Sull. Moist rocks in shady woods and banks; common.
 35 *osmündioides* Hedw. NE. K. (Miss Mara Becker)
 36 *taxifolius* Hedw. Shaded clayey ground; common.
 37 *Leucobryum minus* Sull. Bluff ground in woods; June; frequent.
 38 *vulgare* Hampe: Roots of trees in damp woods; February; common.
 39 *Ceratodon purpureus* Brid. Common.
 40 *Seligeria pusilla* Bruch & Schimp. Shaded limestone rocks, E. K.

GRIMMIACEÆ.—Plants tufted. Capsule symmetrical, on a straight or curved pedicel. Calyptra mitriform. Peristome simple, of 16 transversely articulate teeth or double, the outer of 8 bigeminate or 16 geminate teeth, the inner of 8 or 16 simple filiform cilia or lanceolate segments.

- 1841 *Coscinodon wrightii* Sull. Rocks, W. K.; frequent.
 42 *Grimmia apocarpa* Hedw. Damp rocks, walls, etc.; common.
 43 var. *rivularis* Nees & Hornschuch: Rocks in water courses, E. K.
 44 *calyptata* Hook.
 45 *conferta* Funck, var. *obtusifolia* Schimp. Face of dry shaded rocks; common.
 46 var. *compacta* Lesq. Same habitat.
 47 *leucophaea* Grevius: Dry sandstone rocks; frequent.
 48 *pennsylvanica* Schwægrichen: Rocks; common.
 49 *Hedwigia ciliata* Ehrh. Shaded or moist sandstone rocks; occasional.
 50 *Ptychomitrium incurvum* Sull. Sand rocks, SE. K.
 51 *pygmaeum* Lesq. & James: Stones near streams, SE. K. (Prof. Hall)
 52 *Orthotrichum anomalum* Hedw. Lime rocks.
 53 *brachythecium* Schimp. Trees; not common.
 54 *cupulatum* G. F. Hoffmann: Limestone rocks, W. K.
 55 *speciosum* Nees: Tree trunks; common.
 56 *strangulatum* Beauv. Trees; common.

BRYACEÆ.—Capsule globose, ovoid, or pyriform; nodding, horizontal, or pendent. Peristome double; teeth barred; segments of inner membrane separated by cilia.

- 1857 *Bartramia pomiformis* Hedw. Shady banks. SE. K.; rare.
 58 *Philonotis muhlenbergii* Brid. Springs in sand-hills, C. K.; frequent. (E. A. Rau)
 59 *Leptobryum pyriforme* Schimp. Shady ground, rotten wood, etc.
 60 *Webera albicans* Schimp. Damp sand, near water, NE. K. (Miss Becker)
 61 *annotina* Schwægr. Woods, E. K.; not common.
 62 *nutans* Hedw. Wet grounds, rotten logs, etc.
 63 *Bryum argenteum* Linn. Shades of hedges, etc., E. K.; common.
 64 *bimum* Schreb. Damp sandy ground, rocks, E. K. (Rau)
 65 *cæspiticium* Linn. Crevices of rocks; Common.
 66 *pendulum* Schimp. Dead trunks; frequent.
 67 *pseudotriquetrum* Schwægr. Wet rocks, E. K.
 68 *Mnium affine* Bland: Shaded banks and hedge rows; common.
 69 *cuspidatum* Hedw. Damp ground, E. K.: common.
 70 *Timmia cucullata* Mx. On damp ground, E. K.

POLYTRICHACEÆ.—Plants woody. Capsule cylindrical or angular. Calyptra hairy. Peristome of 32 or 64 solid teeth.

- 1871 *Atrichum angustatum* B. & S. Gravelly soil in woods; common. (Rau)
 72 *undulatum* Beauv. Woods, E. K.
 73 *Polytrichum commune* Linn. NE. K.
 74 *juniperinum* Willd. Prairies, W. K.
 1875 *piliferum* Schreb. Sandy ground, W. K.

PLEUROCARPI--Fruit lateral.

- LESKEACEÆ.**—Capsule cylindrical or oblong, erect or curved. Peristome double, the outer of 16 long teeth, the inner of 16 cilia.
- 1876 *Leskeia polycarpa* Ehrh. Base of trees, E. K., freq.; limestone bluffs, N. K. (Rau)
 77 *rostrata* Hedw. Woods, E. K.; not common. (Rau)
 78 *Thelia asprella* Sull. Base of trees, common.
 79 *Anomodon attenuatus* Hueben: Base of trees in bottoms, common.
 80 *obtusifolius* B. & S. Trunks of trees near water; common.
 81 *rostratus* Schimp. Roots of trees, E. K.; frequent.
 82 *Pylaisia intricata* B. & S. Old trees; common.
 83 *velutina* B. & S. Bark of trees and old logs.
 84 *Cylindrothecium cladorrhizans* Schimp. Dead logs and roots of trees; common.
 85 *compressum* B. & S. Base of trees, common.
 86 *seductrix* Sull. Logs in shady woods; common.

HYPNACEÆ.—Capsule long-pedicled, more or less nodding. Calyptra cucullate. Peristome double; the outer of 16 lanceolate teeth, the inner a membrane divided into 16 carinate segments.

- 1887 *Brachythecium acuminatum*, var. *setosum*. Foot of trees, dead logs, etc., E. K.
 88 *laetum* B. & S. Roots and logs in woods, E. K.; frequent.
 89 *plumosum* B. & S. Moist rocks, E. K. (Rau)
 90 *rivulare* B. & S. Moist woods, E. K. (Rau)
 91 *rutabulum* B. & S., var. Shaded ground, roots of trees, etc.
 92 *salebrosum*, var. *longisetum* B. & S. Moist ground, decayed logs, in woods.
 93 *Eurhynchium hians* B. & S. Shady banks, common.
 94 *strigosum* B. & S. Sandy shades, E. K.
 95 *Rhynchosstegium rusciforme* B. & S. Stones in streams.
 96 *serrulatum* Schimp. Dry woods, E. K. (Rau)
 97 *Plagiothecium sylvaticum* B. & S. Base of trees in dense shady spots, E. K.
 98 *Amblystegium radicale* B. & S. Decayed logs in shade, E. K.
 99 *riparium* B. & S. Stones, decayed wood, etc., in standing water, N. E. K.
 1900 var. *cariosum* Sull. Saline county. (Rau)
 1 *serpens* B. & S. Decayed wood, moist earth and stones in wet places, E. K.
 2 *Campylium chrysophyllum*: Moist ground, dead wood, roots of trees, etc., S. E. K.
 3 *hispidulum* Mitten: Ground, dead wood, etc., E. K. (Rau)
 4 *Hypnum aduncum* Hedw. var. *Dampnum*, C. K. (Rau)
 1905 *curvifolium* Hedw. Dead logs in shady woods; common.

[Mosses, 101]

HEPATICÆ—LIVERWORTS.**JUNGERMANNIACEÆ—SCALE MOSESSES.**

- 1906 *Aneura latifrons* Lindb. On logs.
 7 *Chiloscyphus adscendens* Hook. & Wils.
 8 *Fossumbronia angulosa* Raddi.
 9 *Frullania virginica* Lehm. On trees.
 10 *eboracensis* Lehm. Trees, rocks.
 11 *Jungermannia schradieri* Martius.
 12 *Kantia trichomanis* S. F. Gray.
 13 *Lejeunea clypeata* Sull. On rocks.
 14 *Lophocolea minor* Nees. On rocks.
 15 *Pallavicinia lyelli* S. F. Gray. Ground.
 16 *Pellia calycina* Nees. On rocks.
 1917 *Porella platyphylla* Lindb. On ground.

MARCHANTIACEÆ—LIVERWORTS.

- 1918 *Anthoceros punctatus* L. Wet banks.
 19 *Asterella hemisphaerica* Beauv.
 20 *Conocephalus conicus* Dum. Shades.
 21 *Grimaldia rupestris* Lindenb.
 22 *Marchantia polymorpha* L. E. Kan.
 25 *Preissia commutata* Nees. On rocks.

RICCIACEÆ.

- 1924 *Riccia crystallina* L. On damp ground.
 25 *fluitans* L. On water.
 26 *lescuriana* Aust. On the ground.
 27 *lutescens* Schwein. On ground.
 1928 *natans* L. On the ground.

ADDENDA.

- 1929 *Anemone patens* L. 51 (Mrs. Merrell)
 30 *Amorpha microphylla* Psh. 37 (Barth.)
 31 *Astragalus Purshii* Dougl. 27 (Barthol.)
 ° 32 *Lespedeza striata* L. 41 (Prof. Castle)
 33 *Geum vernum* T. & G. 41 (Castle)
 34 *Ammannia wrightii* Gray: 27 (Barth.)
 35 *Gaura villosa* T. & G. 78, 88 (Smyth)
 36 *Liatris acidota* Eng. & Gray: 56 (Smyth)
 37 *Gutierrezia texana* T. & G. 85 (Smyth)
 38 *Artemisia wrightii* Gray: 27 (Barthol.)
 39 *Thelesperma filifolia* Gr. 56, 66 (Smyth)
 1940 *Veronica scutellata* L. 27 (Barthol.)
- 1941 *Calamintha nuttallii* Gray: 33 (Carleton)
 42 *Amarantus palmeri* Watson: 27 (Barth.)
 43 *Chenopodium fremontii* Wats. 27
 44 *Euphorbia cuphosperma* Boiss. 27
 45 *hirtula* Eng. 27 (Bartholomew)
 46 *Tradescantia virginica*, v. *villosa* W. 27
 47 *Heteranthera limosa* Vahl. 27 (Barth.)
 48 *Scirpus supinus*, var. *Hallii* Gray: 27
 49 *Aristida oligantha*, v. *minor* Vasey: 27
 50 *purpurea* Nutt., v. *Hookeri* Torr. 27
 51 var. *Berlandieri* Torr. 27 (Barth.)
 52 *Panicum nitidum* Lam. 27 (Dr. Vasey)
 1953 *virgatum* var. *glaucum* Vasey: 27

LARGEST ORDERS.

Cellular Acrogens	122

— 164

Total species of Kansas plants named here 1953

Number of genera, 681; number of orders, 124

LARGEST GENERA.	
Carex	71
Aster	32
Asclepias	24
Polygonum	23
Euphorbia	23
Panicum	23
Helianthus	21
S. lidago	21
Oenothera	21
Astragalus	18
Desmodium	15
Artemisia	14
Rumex	13
Cyperus	13
Sporobolus	13

SPECIAL OFFER.

For the purpose of helping botanists and collectors to get acquainted with the plants of the western plains, I will send by mail, American postage prepaid, to any address in America or Europe, a collection of 20 to 25 named plants, complete specimens, on receipt of one dollar federal money. For 10 cents additional I will register the package and guarantee safe delivery.

The attention of American collectors is called to the business notes on page 6.

Address

B. B. SMYTH,
Topeka, Kansas.

SUPPLEMENT, Sept. 1, 1892.

- 1954 Gypsophila muralis L. 29
- 1955 Lactuca scariola L. 5-8, 27-9, 31-5
- 1956 Lepachis tagetes L. 8-9, 28-9, 47-9, 56, 66-9, 76-9, 85-9
- 1957 yellow-rayed variety: 29. [In this, some of the forms have short yellow-margined rays, others pure yellow rays, and still others have conspicuous yellow rays nearly 4 cm. long, on very robust plants 4 to 5 dm. high, with slightly elongated heads, but very distinct in habit from *L. columaris*.]
- 1958 Scirpus atrovirens, var. pallidus Britt. 25
- 1959 Andropogon saccharoides, var. submuticus Vasey: 86
- 1960 Aristida purpurea, var. Fendleriana Coult. 7, 27
- 1961 Beckmannia erucæfolia Host. 29

Number of species of trees in the state of Kansas, 102.
